Gerald Sim

CLOUD INFRASTRUCTURE · SITE RELIABILITY · KUBERNETES · AUTOMATION

gerald@meappy.com | Adelaide, South Australia | sysad.mn | linkedin.com/in/geraldsim | github.com/meappy

PROFILE

Infrastructure engineer with 15+ years on production Linux and cloud, usually the senior infrastructure voice in a small team. I build and own the foundation a platform runs on: landing zones, networking and private connectivity, Terraform and CI/CD, IAM and secrets, observability and recovery, across GCP, AWS and Azure, with Kubernetes in production on GKE, EKS, AKS, Rancher and OpenShift. That spans retail at scale and regulated financial infrastructure, including the GCP foundation beneath a settlement platform and the architecture and secrets-management documentation its auditors ask for. Much of my work is automation: taking manual steps out of operational and back-office processes, using AI where it beats a script.

CORE SKILLS

CLOUD	GCP · AWS · Azure. Landing zones, VPC/CIDR design, private connectivity, cost visibility (FinOps)
KUBERNETES	GKE · EKS · AKS · Rancher/RKE · k3s · OpenShift. Helm, ArgoCD, image supply chain
IAC & CI/CD	Terraform (module design, remote state, drift control) · Ansible · SaltStack · GitHub Actions · Azure DevOps · HCP Terraform
SECURITY	IAM & least privilege · Workload Identity Federation · Secret Manager / KMS · network segmentation · Cloud Armor · OIDC/SAML (Entra, Google)
OBSERVABILITY	Prometheus · Grafana · Splunk · Elastic · New Relic. SLOs, alerting, runbooks, incident response
PLATFORM	RHEL · Ubuntu · Nginx/Apache · MySQL/MariaDB · Redis · DNS, TLS, routing, firewalling · Bash, Python
AI AUTOMATION	Vision and language providers wired into operational workflows · Playwright browser automation · deterministic-first, model-on-fallback design · agent tooling run as normal Kubernetes workloads
WAYS OF WORKING	Agile · service delivery management · architecture & design authoring · client and auditor engagement

EXPERIENCE

Kubernetes & GCP Cloud Operations Lead, Wipro at Woolworths Group — Mar 2024 – Present

Adelaide, South Australia

- Own how the Kubernetes and GCP platform is run day to day, and build GCP capability across the team.
- Drive the GCP automation programme, cutting manual steps out of routine platform work and standardising how environments are managed.
- Lead Kubernetes delivery across Woolworths' container platform, holding projects to agreed quality and process standards at retail scale.
- Diagnose performance problems on Kubernetes clusters and turn the findings into pre-emptive fixes that remove repeat failures; improve the shared infrastructure codebase and review the team's changes.
- Work with engineering teams and stakeholders on platform direction, prototype new approaches, and mentor engineers.

Site Reliability Engineer / DevOps Engineer, Alcidion Group — Nov 2019 – Feb 2024

Adelaide, South Australia · clinical software for hospitals in Australia, New Zealand and the UK

- Built and operated the cloud infrastructure for Smartpage (clinical messaging) and Miya Precision (clinical decision support): healthcare workloads with real availability and privacy obligations.
- Deployed container platforms across Azure AKS, AWS EKS and on-premise Rancher/RKE (k8s and k3s), led the migration of workloads to GCP and GKE, and built out continuous deployment pipelines in Azure DevOps.

Senior Cloud Engineer / Cloud Consultant, 5G Networks and Comunet — Mar 2019 – Nov 2019

Adelaide, South Australia

- Provided technical leadership on AWS and Azure, supporting pre-sales with architecture design, requirements gathering, solutioning and proof-of-concept delivery.
- Designed and implemented AWS EKS with Rancher, Helm charts and an integrated CI/CD pipeline, and won AWS EdStart funding for an EdTech client migrating to AWS.

Technical Service Manager / Lead Engineer / Linux Escalation Engineer, Hostworks — May 2011 – Feb 2019

Adelaide, South Australia · national enterprise clients

- Owned service delivery, incident management and solution design for enterprise clients including McDonald's, Volkswagen Group Australia, SBS, GM Holden, Sony Music, IAG and Australia Post.
- Automated full-stack blue/green environments in AWS with CloudFormation (VPC, EC2, RDS, ElastiCache) and introduced Docker-based solutions.
- Delivered high-profile campaigns and events under load (McDonald's Monopoly, SBS Eurovision and Tour de France, vehicle launches) with capacity planned and rehearsed in advance.
- Ran escalations across a 300+ RHEL estate in a 24/7 high-severity environment, and mentored operations and NOC staff.

Senior Systems Engineer / Systems Engineer, Ufinity Pte Ltd — Dec 2006 – Feb 2011

Singapore

- Led operations for Mail Ranger, an in-house anti-spam email service for a large healthcare group, and for StarHub pfingo systems; deployed UNIX/Linux and Windows estates, VMware ESX/ESXi virtualisation and replicated MySQL servers for commercial and Singapore government clients.

EDUCATION & CERTIFICATIONS

BA, Mass Communication (Multimedia) 2003–2006
Curtin University of Technology

Diploma, Digital Media Design 1999–2002
Nanyang Polytechnic

Red Hat Certified Engineer (RHCE) 2010
RHCSA in Red Hat OpenStack 2015
Red Hat Certified Virtualization Administrator 2014
Certificates of Expertise: PaaS, Performance Tuning, Network Security 2012–2016

Australian working rights · Languages: English (native), Mandarin (professional working)
